Abstracts

Anti Rust Papers are a type of corrosion inhibitor that are used to protect ferrous materials and nonferrous metals against corrosion or oxidation where it is impractical to apply surface treatments. They slowly release compounds within a sealed airspace that actively prevents surface corrosion. A typical application is to protect stored tools or parts inside bags, boxes or cupboards, one advantage of VCIs being that if the container is opened and reclosed, levels of inhibitor will recover.

The steady growth of the automotive industry and aerospace industry, and the vigorous development of the rail transportation industry are the key factors driving the growth of the market.
