## Abstracts

Antibody Drug Conjugates (ADCs) are monoclonal antibodies (mAbs) attached to biologically active drugs by chemical linkers with labile bonds. By combining the unique targeting of mAbs with the cancer-killing ability of cytotoxic drugs, ADCs allow sensitive discrimination between healthy and diseased tissue. ADCs are part of a specialized subset of highly potent APIs. This technically challenging type of therapy combines innovations from biotechnology and chemistry to form a new class of highly potent biopharmaceutical drugs.
