Abstracts

Coolant or antifreeze is necessary to reduce the freezing point of engine's cooling system and raise the temperature at which the system will boil. A coolant is a substance, typically liquid or gas, that is used to reduce or regulate the temperature of a system. An ideal coolant has high thermal capacity, low viscosity, is low-cost, non-toxic, chemically inert and neither causes nor promotes corrosion of the cooling system. Some applications also require the coolant to be an electrical insulator.
