Web accelerator software is a proxy server used for web acceleration or reducing the time it takes to access a website. It can be downloaded to a particular device or it can be self-contained. Web accelerators speed up the delivery of content without the use of additional server hardware. Web accelerator software can function through a variety of methods, such as HTTP optimization, caching and prefetching, compression, and SSL/TLS processing. These solutions are used by websites needing to be functional for thousands or tens of thousands of visitors and help keep services running as normal for all patrons.
