Abstracts

Water-based thickening rheological additives are refined and modified silicate clay (montmorillonite, attapulgite, sepiolite), white or beige non-toxic and odorless, soft powder. It has excellent dilatibility, colloidal dispersion, suspension and thickening property in water, and is an excellent anti-sinking agent, latex stabilizer and rheological assistant in water system. Water-based thickening rheological auxiliaries also have good adsorbability, ion-exchangeability and non-migratory cohesiveness, so they are widely used in water dispersion systems.
