Abstracts

AI in Automotive is the application of artificial intelligence in cars, which enhances the driving experience through advanced driving standards such as advanced driver assistance system (ADAS) technology, blind spot alert and adaptive cruise control. In addition, artificial intelligence promotes various functions of self-driving cars, such as self-parking, lane assistance and navigation, by identifying objects around the vehicle in real time. Self-driving cars equipped with AI can enhance the user experience and reduce human intervention. AI in auto insurance is driving the development of artificial intelligence in the auto market, as it helps assess risk in real time and speeds up the claims process when an accident occurs. Artificial intelligence is rapidly being adopted in the car industry because it can sense the work of its human counterpart and adjust its movements accordingly to avoid injury.
