## Abstracts

Asset tokenization technology enables individuals and organizations to create a digital proof of ownership for real-world liquid assets such as capital or property. These asset-backed tokens differ from security tokens in that they carry real-world capital and liquid value. Digital assets offer a flexible system for managing various digital assets and facilitating transactions. Once assets are tokenized, they can be used for transactions across the world without the need of a middle man (such as a bank or institutional trader).
