Abstracts

Augmented reality remote assistance is an emerging technology that enables brand agents and product experts to visually guide and collaborate with customers and field technicians.

The original concept of remote assistance is based on a technician's ability to use a remote connection to temporarily view or control a computer or a mobile device over a network or the Internet in order to help solve software issues.

Augmented reality remote assistance takes this concept further. It uses AR and streaming videos to link the contact center and headquarters to the customer's home or the field where the work is being performed. This enables agents to remotely solve hardware issues – seamlessly bridging the physical and virtual worlds.
