Abstracts

Autolysis uses the body's own enzymes and moisture to re-hydrate, soften and finally liquefy hard eschar and slough. Autolytic debridement is selective; only necrotic tissue is liquefied. It is also virtually painless for the patient. Autolytic debridement can be achieved with the use of occlusive or semi-occlusive dressings which maintain wound fluid in contact with the necrotic tissue. Autolytic debridement can be achieved with hydrocolloids, hydrogels and transparent films. It is suitable for wounds where the amount of dead tissue is not extensive and where there is no infection.

This report contains market size and forecasts of Autolytic Debridement Products in global, including the following market information:

Global Autolytic Debridement Products Market Revenue, 2017-2022, 2023-2028, (\$ millions)

Global Autolytic Debridement Products Market Sales, 2017-2022, 2023-2028, (K Units)
