Abstracts

Automated Liquid Handling Workstation is used in automation of Pharmaceutical or biochemical laboratories. It is a robot that dispenses a selected quantity of reagent, samples or other liquid to a designated container. Reducing processing time, decreasing sample contamination, and increasing accuracy in bioassays is possible with Automated Liquid Handling Workstation. These systems release researchers from long, repetitive, laborious tasks, and free up time for other assays, lab reports and other lab duties. Robotic arms distribute accurate measurements of liquids to vessels, such as microtiter plates and change out plates or tubes, thus streamlining workflow.
