Abstracts

An immunoassay analyzer is used in hospital and clinical laboratories to run automated biochemical tests to detect the presence and concentration of substances in the samples. Radioimmunoassay (RIA) is an in vitro assay that measures the presence of an antigen with very high sensitivity. Basically any biological substance for which a specific antibody exists can be measured, even in minute concentrations. RIA has been the first immunoassay technique developed to analyze nanomolar and picomolar concentrations of hormones in biological fluids.
