Abstracts

Automatic Truck Loading System (ATLS) is the first fully automated system to load or unload pallets, slip-sheets, racks, or other types of unit loads. Automatic truck loading and unloading always requires two 'combined' systems: one system in the truck and a 'fixed' installation inside the loading and unloading dock. When a truck docks the entire load is loaded or unloaded automatically. Automatic Truck Loading System allow increased efficiency. The most commonly used truck loading and unloading systems are for shuttle services between production facilities and distribution centres. Truck loading and unloading times are reduced from half an hour to a matter of minutes. Return on investment times are short due to the immediate savings compared to traditional loading and unloading (using fork-lift or hand pallets trucks).
