## Abstracts

Automatic Couplers with fully automatic mechanical, pneumatic, and electric connections. Automatic coupler is in charge of mechanically coupling two units, by means of a simple approximation at a recommended speed of 5 km/h, and without the need of manual assistance. The electric and pneumatic connection of the units is carried out automatically at the same time as the mechanical coupling. This coupler allows the coupled units to resist both horizontal and vertical bends, as well as rotational movements. Uncoupling of the units is also automatic. It is carried out from the driver's desk, although in case of emergency it can be carried out manually by means of an uncoupling handle. The automatic coupler is provided with an energy absorption device that collapses under strong impacts, hence protecting the cars frames.
