An elemental analyzer is a chemical process or series of steps used to determine the elemental composition of a sample and is a common method in Analytical Chemistry Studies. Element analysis can be a qualitative analysis only or a Quantitative analysis analysis. The most common method in element analysis is combustion method, which is used in organic chemistry to determine the element composition of the sample qualitatively or quantitatively after the element is converted into the corresponding oxide. The automatic element analyzer includes CHN mode, CHNS mode and o mode. The method can automatically, rapidly and accurately determine the contents of hydrocarbon, nitrogen, sulfur and oxygen (C, H, N, s, O) in organic and some inorganic compound samples simultaneously.
