## Abstracts

Automatic food dehydrators refer to devices that remove moisture from food to help preserve it. Food dehydrators use a heat source and airflow to reduce the moisture content of food. The automatic food dehydrator can automatically complete the dehydration of food and close it according to the situation through timing. Removing moisture from food can inhibit the growth of various bacteria and destroy food. Additionally, removing water from food can significantly reduce the weight of the food. Therefore, food dehydrators are used to preserve and extend the shelf life of various foods.
