Abstracts

Automatic License Plate Recognition (ALPR/ANPR) is a surveillance system with primary capability of capturing the image of vehicles and identifies their license number. ANPR systems consist of high-speed cameras with IR filters, processors capable of performing optical character recognition (OCR), application software, user interface, and an alert capability to notify operators in case of a match. ANPR systems can be a standalone device or can be used with existing traffic enforcement cameras or closed-circuit televisions and are used by the police forces across the globe to prevent and detect crimes. These systems are also used for electronic toll collection on roads and for monitoring traffic activities such as red light adherence and speed enforcement. Additionally, ANPR systems can assist in the detection of stolen vehicles. The ANPR technology varies from location to location depending on the designs of number plates.
