Abstracts

An automobile automatic transmission system also called as the self shifting automobile transmission, involves the process of transmitting the power from the engine to the wheels by using automatically changing gear ratios. This helps move the vehicle from one point to another without the need to shift gears manually. Generally, an internal combustion engine with a capacity to rotate at high RPM is used for providing the automatic transmission system. This is primarily because the engine is capable of providing a variety of speed range and torque outputs, which are essential and beneficial when the vehicle moves in heavy traffic condition.
