Abstracts

The Automotive clutch actuator is composed of an electric oil pump, a solenoid valve and a clutch cylinder. When the ECU gives the command to drive the electric oil pump, the high-pressure oil produced by the electric oil pump is transferred to the clutch cylinder through the solenoid valve. Through the ECU control solenoid valve current to control the flow of oil and oil channel transformation, to achieve the clutch cylinder piston movement, so as to complete the start of the car, shifting the clutch action.
