## Abstracts

Cockpit SoC products featuring great computing power, multi-integration and strong AI boast ever better performance. As intelligent cockpits gain pace, the main control SoC of cockpits not only needs to meet the needs of multi-screen scenarios such as cluster, cockpit display, and AR-HUD, but also to perform operations such as voice recognition and vehicle control. User experience indexes of cockpit systems, like response speed, boot time, and connection speed, directly determine whether an auto brand is competitive or not. Smart cars have increasingly high requirements on performance and computing power of cockpit SoC.
