## Abstracts

Cruise control is a unique feature in a vehicle that controls the speed of the vehicle automatically. The cruise control system allows the vehicle to run at a constant speed without interference of the driver. It is generally controlled by the engine control module. The engine control module utilizes speed sensors to compare the actual speed with the set speed. The data transmitted by the speed sensor is received by the electronic control throttle, which operates the throttle valve in order to maintain the desired speed of the vehicle. The cruise control feature offers a comfortable ride for a long journey, less driver interference, and better fuel-economy.
