Abstracts

Dry Film Lubricants reduce friction between two sliding surfaces while functioning at high operating pressure and temperature without the need for oils and greases. These lubricants offer long-lasting lubrication, protection from corrosion, and resistance to wear & tear. Dry film lubricants can operate at temperatures of up to 350 °C in oxidizing environments and up to 1100 °C in non-oxidizing environments. These lubricants are made from materials such as Polytetrafluoroethylene (PTFE), boron nitride, graphite, molybdenum disulfide (MoS₂), and tungsten disulfide. Molybdenum disulfide (MoS₂) is commonly used to make dry film lubricants.
