Abstracts

The automotive-grade resistor is an AEC-Q200 certified resistor device. AEC-Q200 is an automotive-grade quality certification for passive components. Some of its reliability test items include life test, temperature cycle, high humidity, high temperature storage, high temperature operation, humidity resistance, etc. Because automobile fuel and gasoline contain sulfur, the resistance pins (silver-palladium alloy) near the engine are often corroded, resulting in non-conductive silver sulfide crystals. Open the road, endanger the life of the driver. Therefore, automotive resistors are often subject to anti-vulcanization treatment to improve the reliability of the resistor. Vehicle-gauge resistors are also often used in a variety of industrial applications.
