Abstracts

The plain carbon electric resistance welding (ERW) tubes are made up primarily of carbon, with minor amounts of manganese, silicon, sulphur, and phosphorus thrown in for good measure. These tubes are ideal for cold deformed shapes in automobile body frames and rear body frames because of their excellent formability and weldability. The most common applications for automotive plain carbon ERW tubes are steering linkages, steering column, shock absorber, propeller shaft, tie rod, body frames, rear body frames, and axel tubes.
