Abstracts

The use of polymer matrix composites on a large scale in the manufacturing of exterior components such as rear windshield glazing, fender, panoramic roof modules, wheel covers, headlight lenses, headlight housings, bumper, and front grille is expected to drive the market over the forecast period. The automotive industry is witnessing challenges in aligning production or assembly processes with enhanced material properties and innovative product design, especially for large-volume production facilities. Although aluminum and steel are mostly used in lightweight vehicles, high-performance FRP composites can potentially outperform both aluminum and steel.
