Abstracts

The receiver drier is used in the high pressure liquid line, between the condenser outlet and the expansion valve inlet. The car receiver dryer is an integral part of the AC system. It works with all other components of the car's AC system to generate cold air in the loop. The car receiver dryer is designed to provide a temporary storage container for the refrigerant, as well as a filter to help remove debris and moisture from the system. Car Receiver Dryer is filled with desiccant—a hygroscopic material. In addition to storing refrigerants, automotive air conditioning systems also filter out moisture and particulate matter that are harmful to automotive air conditioning systems.
