## Abstracts

An automotive slipper clutch is a torque limiter with an integrated freewheel mechanism, which allows the clutch to partially disengage while decelerating the speed of vehicles. It reduces overall momentum and sudden forces inside the transmission and helps minimize engine braking and increase transmission longevity. Besides this, it absorbs shock and vibrations, prevents rear-wheel lock up and engine seizure and improves the performance of vehicles. Currently, the automotive slipper clutch with an anti-lock braking system (ABS) is gaining traction as it reduces the chances of accidents or collisions and enhances the braking system of vehicles.
