Abstracts

A tow bar is a device attached to the chassis of a vehicle for towing. It may be in the form of a tow ball to allow swiveling and articulation of a trailer, or a tow pin, or a tow hook with a trailer loop. The tow bar is often used for large or agricultural vehicles where slack in the pivot pin allows similar movements. There are usually four types of tow bars, such as detachable, fixed, swiveling, and others used in automotive.
