## Abstracts

The automotive variable discharge oil pump modify the delivery volume flow according to the engine oil demand and avoids the unnecessary pumping of the oil that causes an over consumption of fuel as well manage power consumption in the vehicle. Lubrication generally increases fuel consumption and impose a higher load on the engine. The oil consumption of engine is proportional to bearing clearances, load, operating temperature, speed & state of the wear of the engine. The conventional mechanical oil pump is attributed to the operating speed, and hence has no control on the oil flow. The automotive variable discharge oil pump can also joined with the balancer shaft unit and vacuum pump.
