## Abstracts

Autonomous Driving Lidar is a radar system used in the automotive industry that emits laser beams to detect the position, velocity, and other characteristic quantities of targets. Its working principle is to transmit a detection signal (laser beam) to the target, and then compare the received signal (target echo) reflected from the target with the transmitted signal, and after proper processing, the relevant information of the target can be obtained, such as Parameters such as target distance, bearing, height, speed, attitude, and even shape can be used to detect, track, identify and avoid targets.
