Abstracts

A HUD is any transparent display that gives a pilot a seamless view of critical flight information, projected directly in the pilot's line of sight (e.g., on a screen just inside the windshield). This allows the pilot's eyes to remain focused outside the aircraft—the HUD's virtual images may appear to be projected a distance in front of the aircraft, so that the pilot does not have to change focus to the HUD screen itself (this screen may be only centimeters away) or to look elsewhere for critical information (such as an instrument panel in the cockpit).
