Avionics racks are designed and tested to meet the necessary vibration, shock, and environmental conditions during the service life of the aircraft. The selection of materials for avionics racks is dependent on several parameters including temperature resistance, lightweight, durability, strength, cost, availability, etc. Stainless steel, aluminum, and composites are the three major materials used by the manufacturers on the basis of their characteristics. In recent years, composites have been gaining traction in the market driven by their enormous advantages over other materials.
