Abstracts

A baby bottle thermometer is an instrument specially used to measure the temperature of milk. The water temperature needed for baby milk powder should not be too high, with 50-60 degrees Celsius boiling water is appropriate. If the water temperature is too high, the milk powder will not only lose its nutrition, but also burn the baby. Therefore, after using a bottle thermometer, the temperature of the milk can be measured at any time to avoid burning the baby, safe and easy.
