## Abstracts

An increase in the preference for low-cost and highly efficient power generating sources has resulted in a rise in the use of renewable sources like sun, wind, and sea waves. Wind Energy requires very limited capital as compared to other renewable resources and holds a wide-scale commercial and domestic application. Rising environmental concerns have resulted in increased demand for low-cost products used in manufacturing the medium required for generating energy by the Renewable energy sources. Bamboo Composites provide an excellent, efficient, and low-cost medium for manufacturing components required for generating Wind Power. Turbine Blades made by using Bamboo Composites have a slow rotational speed and generate a limited amount of energy which has made them an excellent choice for small-scale installations in farms and commercial centers. The presence of a higher stiffness-to-weight ratio has resulted in increased demand for Bamboo Composites by the Wind Power generation equipment manufacturing industry.
