Abstracts

Bandage scissors, or bandage forceps, are scissors that often have an angled tip with a blunt tip on the bottom blade. This helps in cutting bandages without gouging the skin. Bandage scissors are very popular in any health care facility because they are designed to safely lift bandages away from skin for easy cutting. The bottom blade of the scissor is longer and goes easily under the bandages. The blunt tip design of the scissor prevents accidental injury while making bandage removal very easy, smooth, and quick.
