Abstracts

Banks with aging systems find they are simply incapable of supporting today's business processes, new modes of doing business, and the need for customer-centricity. For most banks, these requirements place pressure on the evaluation and build-out of their core banking functions. While the drive to overhaul systems is strong, a number of banks are feeling the sting of their decisions. The solution comprises many modules supporting mission-critical banking operations, including retail, treasury, private banking, back office operations, risk management, and trading. The system is centered on the bank's core customer information and provides extensive risk monitoring and settlement capabilities as well as statutory reporting, and its own fully integrated general ledger.
