Abstracts

High-speed running bearings refer to bearings that reach speeds of up to 60 meters per second. The high speed, medium speed and low speed of the bearing are not determined by the rotational speed but by the linear speed. A small bearing with tens of thousands of revolutions is not a high-speed bearing, and a few hundred revolutions of an extra-large bearing is a high-speed bearing. Among sliding bearings, hydrostatic bearings, hydrodynamic bearings, gas static bearings, and gas dynamic bearings are all suitable for high-speed rotation.
