Abstracts

Logistics benchmarking can be broadly divided into two groups: transportation rate benchmarking and performance benchmarking of logistics-specific metrics. Not all benchmarking service companies supply data for both or offer the same level of coverage and granularity.

Transport benchmarking not only provides a comparison of current transport costs against competitive market rates, but also insight into wider market issues such as payment terms, price validity, and contract duration. The analysis may also identify why your freight may not be attractive to carriers.

Logistics metrics are quantitative measurements that track certain processes within the logistics framework. The best design for a logistic system or component(s) of a logistics system truly depends upon the metric(s) used for measuring the performance.
