Abstracts

Blood glucose monitoring is the use of a glucose meter for testing the concentration of glucose in the blood. Particularly important in diabetes management, a blood glucose test is typically performed by piercing the skin (typically, on the finger) to draw blood, then applying the blood to a chemically active disposable 'test-strip'. The test is usually referred to as capillary blood glucose. Continuous glucose monitoring automatically tracks blood glucose levels, also called blood sugar, throughout the day and night. You can see your glucose level anytime at a glance. You can also review how your glucose changes over a few hours or days to see trends. Seeing glucose levels in real time can help you make informed decisions throughout the day about how to balance your food, physical activity, and medicines.
