Bismuth germinate $\text{Bi}_4\text{Ge}_3\text{O}_{12}$ commonly abbreviated as BGO, is the crystalline form of an inorganic oxide with cubic eulytine structure, colorless, transparent, and insoluble in water. When exposed to radiation of high-energy particles, or other sources, such as gamma rays and x-rays, it emits a green fluorescent light. The light has a peak wavelength of 480nm, with its high stopping power, high scintillation efficiency, good energy resolution, and non-hygrosopes. BGO is a good scintillation material and has found a wide range of applications in high energy physics, nuclear physics, space physics, nuclear medicine, geological prospecting, and other industries.
