Abstracts

Bio-based polyamides, also known as bio-based nylon resins, are a new group of bioplastics, which are produced from natural fats and oils that are renewable resources. Majority of these are based on sebacic acid, except for polyamide 11 (also called Nylon 11 or Polyundecanolactam), which is based on undecylenic acid. Bio-based polyamides have excellent mechanical properties including high tensile strength, flexibility, toughness, and good resilience and abrasion resistance. They also offer various advantages such as lower moisture absorption, higher impact strength, and improved chemical resistance. They also have higher melting point, much higher elongation at break, and lower modulus.
