Abstracts

Biochemical tests are the tests used for the identification of bacteria species based on the differences in the biochemical activities of different bacteria. Microbial biochemistry tests shorten the time required to identify microbes, reduce costs, and ensure or enhance the accuracy of identification of an unknown sample. It is the fastest developing trend in microbial identification. Biochemical tests can be used to determine the prognosis of a disease. Biochemical tests can be used to detect the development of complication of disease or their treatment before these become obvious clinically and thus allow appropriate action to be taken before any clinical deterioration.
