In a female has an average of 408 Periods and uses an average of 6,120 Pads in her entire lifetime and Menstrual Hygiene Alliance of India (MHAI) has approximated that there are 336 million menstruating women in India, of which 36% use disposable sanitary napkins — that totals to 121 million women.

A mind-blowing number of sanitary pads. And also, according to the research these pads do not completely decompose before 600-800 years leaving behind plastic remains. These pads usually end up filling our lands and water bodies, leading to exploitation and pollution of these resources. Not only do they harm our environment but they also have a huge impact on our health. The chemicals infused plastic made sanitary pads can cause irritation, rashes, allergic reactions, and genital infections. In worse cases, can also lead to infertility.

Biodegradable pads are made up of bamboo, jute, starch, corn and banana fibre usually, making it free from any chemicals, parabens, plastics & dyes. This makes them fully degradable and decreases the chances of plastic accumulation. Plastic pads take up to 700-800 years to decompose completely, but biodegradable pads start decomposing within the year of use.
