Abstracts

Biofuels are the renewable and sustainable source of fuels which are mainly formed by waste plant and animal matter. Biofuel enzymes are biological catalysts which alter and speed up the ongoing reactions and increases productivity, performance and environmental gains in the biofuels. Biofuel enzymes serve various applications in biodiesel, lignocellulosic ethanol, corn/starch based ethanol and others. Biofuel enzymes increase specificity and efficiency of products. Growing environmental concerns and increased government policies to form legislations for blending of biofuel have turned to be the prime driver in broadening the market for biofuel enzymes.
