## Abstracts

Biological Surgical Sealants and Adhesives typically come from the water base group, most being from natural sources. Some of these systems are being developed as UV-cured systems. Additionally CA, a structural adhesive, has also been used. Although fibrin glues or matrices (FM) have been used the most extensively and for the widest variety of applications, the CAs, GRF, mussel adhesive proteins (MAP), and others could be used for similar purposes if fully exploited.
