Abstracts

Drug therapy is currently the core method of treating bipolar disorder, that is, the use of emotional stabilizers to adjust the patient's mood. Bipolar disorder is complex and difficult to control. The drug effect of emotional stabilizers can help patients to suppress their emotions when they are too high, to increase their emotions when they are depressed, to stabilize their emotions at a normal level, and to effectively prevent the recurrence of bipolar disorder. The quickest and most effective approach may be convulsive-free electroconvulsive therapy.
