Abstracts

As the computing level of the bitcoin whole network is rising exponentially, a single device or a small amount of power can not get the block reward provided by the bitcoin network on the bitcoin network. After the whole network has been upgraded to a certain level, it is too low to get the reward probability. Some of the 'bitcointalk' geeks have developed a way to combine a small amount of power together, and the web site that is built in this way is called the 'Mining Pool'.
