Abstracts

Blood banks are regulated by specific standards that require the proper labeling for identification and handling. Labeling is critical to the management of human derived products such as plasma. The blood bag and blood bank label is used to label the donor's name, blood type, serial number, date and volume of blood collection, and some precautions and instructions during blood transfusion. In order to keep the blood fresh, the active cells in the blood need to 'breathe'. Therefore, the packaging material uses a breathable, salted polyethylene plastic bag. This material is soft, easy to process, and has good adhesion to blood vessels. The appropriate markers also ensure the right type is used for a transfusion.
