Blot processor is able to manage dilution and its dispensation, reagent dispensation, incubation times, strip washings, dot assessment by image processing of strip; the supplied software is also to provide the final report and record the results. Pictures of processed strips are directly taken from a digital colour camera when are still into the allotment trays. The system is able to automatically determine the strip position, indentify the related blots, measure the blot intensity and give the results. Then the digital images are stored with a detailed report in a file, avoiding the tiring and time consuming task to collate the strips for the record.
