Abstracts

Bluetooth Bottle Bass Speakers is a portable expandable speaker that enables users to play audio by using a source device (such as a smartphone, tablet or computer, with a bluetooth wireless connection). The bluetooth connection performs the function of establishing a one-to-one link between the source device and the speaker through which audio data is transmitted. It also provides a higher bass level than other speakers to provide the best auditory experience. And it's powered by a built-in rechargeable battery. As the sound passes through the bottle, it increases the bass. The bigger the bottle, the better it sounds. Sound travels like a 360-degree speaker.
