Mainly refers to the materials used to make the superheater, the main steam pipe and the heating surface of the boiler fire chamber. The performance requirements for boiler steel are mainly good welding performance, certain high temperature strength, alkali corrosion resistance, oxidation resistance and the like. Commonly used boiler steels are low-carbon killed steel or electric furnace smelted low carbon steel smelted in open hearth furnace, and the carbon content W_c is in the range of 0.16%-0.26%. Pearlitic heat-resistant steel or austenitic heat-resistant steel is used in the manufacture of high-pressure boilers. In recent years, ordinary low-alloy steels have also been used to construct boilers, such as 12 manganese, 15 manganese vanadium, and 18 manganese molybdenum rhenium.
